		2021/5-2021/9
Related Company: Hyeco Smart		
Description: The CMS built with Gin as the framework, including BOM, production management, order management, personnel permissions, etc., all the front-end, back-end and database work (except external interfaces) are done by myself.		
		2020/1-Present
Description: github open source project.		
All work is done by myself.		
Function: big data statistics, analysis and query, data visualization.		
Languages: HTML5, SQL, MongoDB, JS, jQuery, echarts.		
Main responsibilities: The front end is built by github page, the database is MongoDB, and the big data comes from players.		
		2017/4-2017/5
Description: This is a proposal that I proposed and implemented in my work. Seeing that there are a lot of clerks doing some tedious and repetitive work, I made up my mind to simplify this process for the company.		
Get the data generated by all the projects, integrate and summarize them into the library, use the computer program to automatically obtain the data and upload them, Replace the clerk's filling, calculation and typesetting operations.		
Simplify the process and use code to grab data instead of manual input.		
Establish document archiving specifications to make them traceable.		
Provide bulk operations scripts for clerks.		
Write an automatic billing template instead of manually making bills.		
Make a program in which the transportation fee is automatically positioned to the working hours.		
Follow up, update and maintain according to needs.		
 Study Abroad QS Rank: 103		2011/10-2015/7
Bachelor   Physics		
(Including IT skills、languages、certifications and trainings)
